Bristow's Angled Disc Precision Strip Till Rape Drill Patent Pending

Can be retro fitted to customers machines

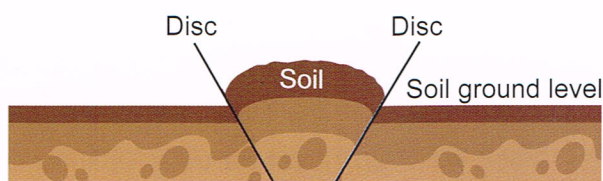

Conventional open V slot

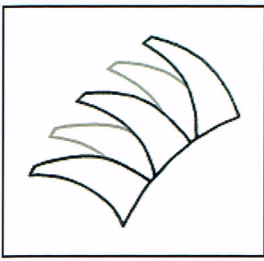

Difficult to close open slot to get good seed to soil contact.

Gives easy access for slugs with open air pockets, allows drying out having to wait for further rain resulting in loss of vigour slow growing plants.

Bristow's Angled Disc no open slot

Angled discs lifting the soil opposite each other retains the soil, flat roll under extreme pressure presses soil flat, retains the moisture and prevents further drying out at point of drilling, gives excellent seed to soil contact with no open air pockets, difficult for slugs to get to the seed to take the chit.

Bristow's Angled Disc Precision Strip Till Rape Drill

Bristow's Angled Disc Precision Strip Till Rape Drill Trials, drilled 23-09-2016 benefits and growths stages

Perfect establishment retains what moisture you have at point of drilling, pressed flat helps prevent further drying out and gives perfect seed to soil contact provides fast growing strong vigorous rape plants.

Deep loosening the soil and filling in the air pockets gives the perfect tap root which is vital for the rape plant to draw its moisture and nutrients throughout its growing stages.

- Tillerroll cultivates and closes deeper air pockets
- Angled Discs drilling each side of slot retains soil between them excellent seed cover.
- Angled Discs lift soil as opposed to forming an open slot helps preserve moisture.
- Steel flat roll under extreme pressure seals moisture in retained soil at point of drilling.
- Flat pressed soil retains moisture, prevents wind drying out, improves seed to plant percentage.
- Flat pressed soil gives perfect seed to soil contact, seed chits within two days without rain.
- Provides early vigour for faster growth, helps with flea beetle and slug damage.
- Not necessary to roll leaves a good level consolidated finish across entire field.
