

# Bristow's Split Level Subsoiler Multi-Tooth Tiller Roll Combination

*Makes an outstanding difference for early rape establishment  
with its new 3-in-1 elements*

See our website for illustrations and full explanation - [www.TillerRoll.co.uk](http://www.TillerRoll.co.uk)

**See the outstanding benefits achieved with the Bristows Split Level Subsoiler Multi-Tooth Tiller Roll Combination when planting rape.**

## Photos Top Left and Right

Neighbouring fields sown on the same day with conventional seed with the subsoiler method. *Pictures taken 10/11/2010.*

## Centre Photo

Rape established with the Split Level Subsoiler Multi-Tooth Tiller Roll Combination Sown 5/9/2010. soil type Heavy land, conventional seed Type NK Grandia. Notice how uniform the rape is established and that the land is level and evenly consolidated the slots completely filled in no open voids, exceptional and absolutely perfect establishment with perfect tap root growth and top canopy.

**Above** The above conventional rape plant varieties were all sown on the same day and compared on the 10/11/2010. The middle bunch was sown with the Split Level Subsoiler Multi-Tooth Tiller Roll Combination. The outer bunches were sown in close neighbouring fields with conventional seed and subsoiling methods. Notice the exceptional difference between the tap root length and the canopy growth.

## How Bristow's Three in one split level subsoiler multi-tooth tiller roll combination works

### 1st Process

Front leading A shares lifts and separates a shallow layer of top soil and straw. Helps prevent sub soil from boiling out.

### 2nd Process

Sub Soil legs set at 200 to 250 mm deep lifts and breaks up the sub soil directly in line with the front leading tines to provide drainage and an easy passage for the rapeseed tap root to grow.

### 3rd Process

The tiller roll with its unusually closely spaced teeth provides at least three rows of teeth directly above the lifted disturbed soil, cultivating, mixing, consolidating and filling the slot, providing the optimum soil to seed contact to encourage an early establishment for rape to grow deep straight strong tap roots and canopy to maximise yield potential.
